FREEZEALARM from Control Products

*Protects your home & vacation property from **FROZEN PIPES***

Your home or vacation property is a valuable asset you shouldn't have to worry about while you're away. Bad weather, power loss or furnace failure can cause significant damage to your home and valuables. The **FreezeAlarm** is the affordable solution, assuring you peace of mind. The **FreezeAlarm** automatically calls up to three phone numbers to alert you of a drop or rise in temperature or power loss inside your primary residence or vacation home.

Intermediate FreezeAlarm

Model FA-I-CCA

\$195.00 plus \$11.00 S & H

OUR MOST POPULAR MODEL!

- Automatically calls up to three phone numbers if the temperature drops, power fails or the back-up battery requires replacing.
- Clearly identifies the exact problem to the person answering the phone or leaves a clear message on a voice mail and answering machines.
- Quick Status Check™ allows you to *hear* what the current temperature is in your property, hear if the power is “on” or “off” and *hear* what the voltage of the back-up battery is at. The FreezeAlarm actually talks to you! It's like having a live-in caretaker.
- Users can record their own greeting message and alarm message which helps to better identify other callers or people on their call-to list the property that is having a problem.
- Voice Prompted Programming offers an intuitive method to program your phone numbers, set the temperature alarm set-point and select other options to customize your FreezeAlarm to work with your voice mail or answering machine. The FreezeAlarm actually talks you through the programming of all required programming functions.
- Monitors for either a “too hot” condition or “too cold” in the home. Users set a temperature alarm set-point (or accept the factory default of 45°F/7°C) and then select if they wish to have the unit call them if the temperature drops below this temperature or if it rises above this temperature.
- The High Temp Alarm makes the Intermediate FreezeAlarm an excellent monitoring device for homes with elderly relatives or homes with pets. It also is an excellent and affordable computer room monitoring device or refrigeration / freezer / walk-in cooler monitoring device.
- Wide Temperature Range allows you to monitor any temperature from -66 to 302°F (-55 to 150°C).
- Automatically resets when you have acknowledged the alarm and corrected the alarm condition.
- Remotely change any of the programming options, remotely cancel the alarm call-out and remotely check status via the Quick Status Check™ feature.
- Four digit security code prevents unauthorized access.
- Listen to temperatures in either degrees Fahrenheit or Celsius.
- No monitoring fees or installation costs.

Products to protect your Property Against Frozen Pipes
